T2A2 Marketplace App

Aiden Waring - CAB012027

A problem I was trying to fix

❖A problem that I experienced with Instagram that I aim to solve by building this app was that there was little-to-no strictly coding content such as photos or pages that shared photos of code snippets.

Solution: PostCode

❖A social media platform for posting code.

❖Code snippets - inspirational, educational, and with flare. Show off your work.

❖Code only - no Insta-influencers, no politics, no marketing. No BS.

❖Ethical Issues?
  ❖Encroaching on SO's audience, though different enough for this to exist.

Primary features and details of each

❖ 1. Viewing other's posts

❖ 2. Posting your own images to share

❖ 3. Like and comment on other posts

❖ 4. Contribute to other developers for sharing their content

Code Demonstration

❖Put in in an express post bag. It's time to send it.

Biggest Challenges

❖Rails

Lessons Learnt

❖MVC Structure

❖More gem application

❖API's

What I'd continue working on

❖Likes and comments

❖Reporting for administrators

❖Contribution system

❖API integration

Thank You
